

Super Elasticlay MOLDMAKER

Make flexible one-sided moulds with Super Elasticlay MOLDMAKER. Extra soft and pliable to shape around even the most intricate detail. After baking, an Elasticlay mould is permanent and flexible. Pour in Plaster of Paris or use it with a talcum powder release as a push mould for metal clay, air dry clay or polymer clay.

Repairs picture frames, sculptures or makes moulds of your favourite creations.

Additional Use: Acts as a great "clay softener" when mixed with stiff clays. To soften stiff clay, add small balls of the Super Elasticlay MOLDMAKER incrementally until the desired consistency is reached. Usually about 1% of the original volume will be enough to soften stiff clays.

Find a one sided item to make into a mould

Carefully remove the moulded item and bake the Elasticlay mould

Press the item into a ball of Super Elasticlay

Make duplicates of your impressions with Plaster of Paris (no release agent required).

Then paint and decorate as desired

Or, use Elasticlay mould with a talcum powder release for polymer and air dry clay or olive oil with metal clay.
